

Observed layers

Auditor holds

Method

Where evidence appears

injection

Prompt + weights
+ logged states

Clean
counterfactual

Downstream deviations
from the clean run

injection

Weights + a pair
straddling injection

Block
recomputation

Injection boundary only
Other pairs: 0/50; 0/15*

injection

Weights + one late
layer + clean bank

Reachability
audit

At the logged layer
Can persist downstream

Filled: logged states · schematic positions · *single-example recomputation; batched results differ
